

# → Counting Sort

arr → ~~1~~, ~~1~~, ~~1~~, ~~2~~, ~~2~~, ~~7~~, ~~5~~, ~~3~~

freq → 0, ~~2~~, ~~2~~, 0, 1, 1, 0, 1

arr → 1, 1, 2, 2, 4, 5, 6, 7 ← sorted array

freq → 0, 1, 2, 3, 4, 5, 6, 7 ← idx

arr → 1, 1, 2, 2, 4, 5, 6, 7

freq → 0, 1, 2, 3, 4, 5, 6, 7

1, 4, 1, 2, 7, 5, 2

<div>0</div>	<div>1</div>	<div>2</div>	<div>0</div>	<div>1</div>	<div>5</div>	<div>0</div>	<div>2</div>
0	1	2	3	4	5	6	7
→ 0	2	2	0	1	1	0	1 ← freq arr

Bucket

2 → 1

orig (based)

1, 4, 1, 2, 7, 5, 2

$O(n)$

freq

0	2	2	0	1	1	0	1
0	1	2	3	4	5	6	7

$O(k)$

Prefix

0	2/0	4/0	2/4	5	6/3	6	2/6
0	1	2	3	4	5	6	7

$O(n)$

Sum

1, 1, 2, 2, 4, 5, 7

O/p

$O(n+k)$

Prefix [i]  $\rightarrow$  represents correct pos of  
the last unplaced i.

TC  $\rightarrow O(n + k)$  xxx

SC  $\rightarrow O(n + k)$

if value of  $k$  is too high

Stability - Yes

In place  $\rightarrow$  No

$$k = \max - \min$$

$$\max > 10^9$$

min  $\rightarrow -2$

0  $\rightarrow$  0    1  $\rightarrow$  1    2  $\rightarrow$  2    ...

-2  $\rightarrow$  0    -1  $\rightarrow$  1    0  $\rightarrow$  2    1  $\rightarrow$  3    2  $\rightarrow$  4

el - min - el

new - id

-2 - (-2)  $\rightarrow$  0    0 - (-2)  $\rightarrow$  2  
-1 - (-2)  $\rightarrow$  1    1 - (-2)  $\rightarrow$  3

# Radix Sort

→ Counting Sort  <sup>$k^{\text{th}}$  digit</sup>

170, 45, 95, 90, 802, 24, 2, 66

$$O(d(n+d))$$

$d \rightarrow$  digits in the  
max element

802  
↑

$(802/10) \% 10$   
 $802010 \rightarrow \underline{0} \rightarrow \underline{\underline{0}}$

$$\left( (1249^6 69) / 100 \right) \phi_{010}$$

$$(1249) \phi_{010} \rightarrow \underline{\underline{9}}$$

Q<sup>n</sup> Given an array of floating pt no's,  
sort the array.

$$a[i] \in [0.0, 1.0]$$

$$\underline{n}$$

$$n \leq 10^6$$

$[0.0 - 1.0]$   $\rightarrow$  10 bucket based on the first value after decimal

0.94, 0.78, 0.72, 0.39, 0.68, 0.21, 0.23,  
0.26, 0.12, 0.17

$n + n + n$   
 $\rightarrow O(n)$

9.8, 0.6, 10.1, 1.9, 3.07, 3.04, 5.0, 8.0, 4.8, 2.6

$n \rightarrow$  no of buckets (Define it)

range  $\rightarrow (max - min) / n \rightarrow 1.9$

$b1 \rightarrow (a[i] - min) / range$

$n=5$

17 buckets  
sum

$9.8 - 0.6$   
 $\rightarrow \frac{9.2}{1.9}$   
4.8
